3. With respect to the ecologically sensitive areas reported at Question 10 of Essential Indicators above, provide details of significant direct & indirect impact of the entity on biodiversity in such areas along-with prevention and remediation activities.

There is a total of 03 no of ecological sensitive areas located in 10km of radius around our industry premises i.e., Protected Forest, Wildlife Sanctuary, Wet Land.

Significant aspects that may cause environmental impacts are as follows:

- Fugitive emissions of Chlorine, Emissions of HCl & unabsorbed Cl₂, Emissions of PM, SO₂, NO_x, Deposition of PM & SO₂ on nearby area, Emissions due to venting of gases, Risk during venting of pressurised gas / liquid.
- Possibility of soil contamination due to improper disposal and/or transportation of solid and hazardous waste, Possibility of groundwater and soil contamination due to improper disposal/ storage of wastewater.
- Draining material mixed with groundwater and soil can cause damage to flora, fauna found in soil and Soil contamination and destruction of surrounding vegetation and associated biodiversity due to deposition of excess chlorine.

Prevention & Remediation Activities:

- Surface water quality will not be affected due to the industry as industry follows Zero Liquid Discharge policy (ZLD). Constant R & D is being done to Segregate the Effluent based on Quality i.e. High TDS & Low TDS & reduce the Quantity of Effluent generated. Accordingly Proper SOPs are in place for treatment of Waste Water. ZLD is achieved by recycling and reuse of treated wastewater from RO & MEE plant. Final hazardous solid waste generated is sent to PPCB approved Recycler and Permeate is pumped back to Process System.
- The concentration of the pollutants in the environment is maintained within the allowable limits as recommended by MOEF&CC, NAAQI and CPCB guidelines. Through PPCB & CPCB recommended APCD's, water scrubbers and Electrostatic precipitator, vegetation, and human settlements in the vicinity of industry is not likely to be affected. Provision of Caustic scrubbers for neutralisation of waste Cl₂ gas in the plant has been made. Standardized SOPs for critical operations are also followed. Industry has already taken adequate Safety measures to handle such like emergency situations by: Inbuilt Control mechanism in the Process operation system, Gas Detectors / Sensors at Critical / Hazardous locations in the plant

to Monitor & initiate Safety Control mechanism to control / stop its spread beyond the source of leakage and to Mitigate the Consequences of leakage, should it spread beyond the plant boundary. All such possible events & Worst case scenario leading to large scale spread of Cl₂ gas, have been postulated & effect thereof in terms of Dispersion in the Air vis - a vis Dose & Distance to which it may effect, has been studied through Dispersion Modelling using ALOHA software. Sensors are also being installed at the plant boundary facing towards adjoining villagers to monitor & ensure that no Fugitive Cl₂ escapes outside the plant.
